

Trieste 10-02-10

Rottapharm Biotech srl, a biotechnology company developing recombinant therapeutic antibodies for the treatment of specific diseases including osteoarthritis, is seeking a researcher to join the Pharmacology group, which is responsible for the characterization of biotherapeutics as projects progress from lead generation to lead optimization and preclinical development.

Highly motivated and recently graduated candidates with experience in mammalian cell culture (transient/stable transfections), biochemistry (ELISA, WB, IP), molecular biology (DNA preparation, cloning and sequencing) are encouraged to apply. Experience in tissue culture/maintenance of cell lines is indispensable. Experience in microscopy and FACS analysis is a plus.

Applicants should submit (preferably by email) a detailed Curriculum Vitae, the names and contact information of two referees (one of whom must be the current or most recent employer) to:

MICHELA VISINTIN, PhD (michela.visintin@rottapharm.com)
